# Logistic Lights

The flexible alternative for  
put to light and pick by light

## The Logistic Lights Principle

Logistic Lights is the flexible solution for intralogistics, e-commerce fulfillment and replenishment. Design your pick and put processes more efficiently and ergonomically!

Through the intelligent use of proven technology we have developed an innovative solution for light-guided pick and put processes. In contrast to conventional systems, the shelf is not fitted with lighting equipment; instead, a spot of light is projected onto the targeted object.

Any number of objects can be highlighted with a single moveable spot. This makes the installation incredibly simple and enables the system to adapt dynamically to changes in your processes.

Your employees will benefit from the light-directed processes. It puts an end to time-consuming, exhausting searching, making their work more efficient while at the same time reducing error rates.

Logistic Lights can be controlled from your existing IT systems. We provide an open programming interface for any ERP or WMS. The process logic you already use can stay in place, optimized by Logistic Lights.

## Efficiency At Every Level

Low costs and unbeatable flexibility are two of the many advantages that Logistic Lights offers. The result is an unparalleled ROI and a high level of investment security.

### Employees & Logistic Lights

When technology feels natural, ergonomics, acceptance and productivity increase.

- ✓ Quick to learn, intuitive to use
- ✓ Ergonomic sequence of movements
- ✓ Better quality due to lower error rate
- ✓ Higher motivation as searching is less frustrating
- ✓ Reduces fatigue, increases employee working speed

### Return on Investment & Logistic Lights

The low acquisition costs pay off quickly due to the system's incomparable flexibility.

- ✓ Low total cost of ownership
- ✓ No hidden costs
- ✓ Reusable in following projects
- ✓ Measurably higher employee productivity

## IT-Integration & Logistic Lights

Uncomplicated integration into your warehouse management system due to open interfaces.

- ✓ Independent thanks to open HTTP interface
- ✓ Logic and expertise behind processes remain in-house with no external dependencies
- ✓ Compatible with all IT systems
- ✓ Flexibly extendible

## Installation & Logistic Lights

Quick adaption to your requirements, new products and changes to storage situations.

- ✓ Simple to install, easily expandable, low maintenance
- ✓ No equipment needs to be installed on product shelves
- ✓ One spot covers a flexible number of items
- ✓ Objects of different shapes and sizes can be selected

## What Our Customers Say

The Logistic Lights solution is already used by renowned logistics service providers. The close cooperation with our customers produced outstanding results:

“The system is simple but effective and the result speaks for itself: with the help of Logistic Lights, we have been able to accelerate picking by approximately 5 seconds per pick, as the first user in a pilot project. With an annual volume of six million articles we save a considerable amount of time with the use of Logistic Lights and greatly optimize our processes. The system is set up in only a few hours and can be recalibrated at any time in just 5 minutes. We are delighted to have worked with Symbic to make Logistic Lights what they are today: an inexpensive and flexible alternative.”

“The service and commitment of the Logistic Lights team convinced us right from the start. The introduction was planned professionally and efficiently. We achieve greater productivity with the light guidance, and the system known internally as ‘Project Disco Ball’ also achieves a high level of acceptance among employees. We are really enthusiastic about it. It has been a pleasure working with you!”
